

1. Suppose that the water level of a river is 34 feet and that it is **receding** at a rate of 0.5 foot per day. Write an equation for the water level, L , after d days. In how many days will the water level be 26 feet?

$$y = -0.5x + 34$$
$$L = -0.5d + 34$$
$$26 = -0.5x + 34$$
$$\begin{array}{r} -34 \\ \hline -8 = -0.5x \\ \hline -0.5 \quad -0.5 \\ \hline x = 16 \end{array}$$

2. Seth's father is thinking of buying his son a six-month movie pass for \$40. With the pass, matinees cost \$1.00. If matinees are normally \$3.50 each, how many times must Seth attend in order for it to benefit his father to buy the pass?

$$y = \underline{1.00x + 40}$$

$$\begin{array}{r} 3.50x = 1.00x + 40 \\ -1.00x \quad -1.00x \\ \hline 2.50x = 40 \\ \underline{2.5} \quad \underline{2.5} \\ x = 16 \text{ movies} \end{array}$$

3. For babysitting, Nicole charges a flat fee of \$3, plus \$5 ^wper hour. Write an equation for the cost, C , after h hours of babysitting. What do you think the slope and the y-intercept represent? How much money will she make if she baby-sits 5 hours?

$$y = 5x + 3$$

\$ 9
hrs

$$\rightarrow y = 5(5) + 3$$
$$y = \$28$$

4. Rufus collected 100 pounds of aluminum cans to recycle. He plans to collect an additional 25 pounds each week. Write and graph the equation for the total pounds, P , of aluminum cans after w weeks. What does the slope and y-intercept represent? How long will it take Rufus to collect 400 pounds of cans?

$$y = 25x + 100$$

↑ ↑
total # weeks
lbs

$$\begin{array}{r} 400 = 25x + 100 \\ -100 \quad -100 \\ \hline 300 = 25x \\ x = 12 \text{ weeks} \end{array}$$

5. A canoe rental service charges a \$20 transportation fee and \$30 dollars an hour to rent a canoe. Write and graph an equation representing the cost, y , of renting a canoe for x hours. What is the cost of renting the canoe for 6 hours?

$$y = 30x + \underline{20}$$

$$y = \underline{30}(\underline{6}) + \underline{20}$$
$$y = \$200$$

6. An attorney charges a fixed fee on \$250 for an initial meeting and \$150^{per hour} for all hours worked after that. Write an equation in slope-intercept form. Find the charge for 26 hours of work.

$$y = \underline{150}x + \underline{250}$$

$$y = 150(\underline{26}) + 250$$

7. A water tank already contains 55 gallons of water when Baxter begins to fill it. Water flows into the tank at a rate of 8 gallons per minute. Write a linear equation to model this situation. Find the volume of water in the tank 25 minutes after Baxter begins filling the tank.

$$y = \underline{8}x + \underline{55}$$

$$y = 8(\underline{\underline{25}}) + 55$$

$$y = 255 \text{ gal}$$

8. A video rental store charges a \$20 membership fee and \$2.50 for each video rented. Write and graph a linear equation ($y=mx+b$) to model this situation. If 15 videos are rented, what is the revenue? If a new member paid the store \$67.50 in the last 3 months, how many videos were rented?

$$y=2.50x+20$$

$$\begin{array}{r} 67.50 = 2.50x + 20 \\ - 20.00 \qquad - 20 \\ \hline 47.50 = 2.50x \\ \frac{47.50}{2.50} \qquad \frac{2.50x}{2.50} \\ x = \end{array}$$

Lesson 21: Some Facts About Graphs of Linear Equations in Two Variables

Classwork

Example 1

Let a line l be given in the coordinate plane. What linear equation is the graph of line l ?

$y = mx + b$
 rise
run $m = \frac{2}{7}$
 $b = ?$
 Want to find "b" exactly!

FINAL ANSWER
 $y = \frac{2}{7}x + 2\frac{4}{7}$

$y = mx + b$ use $(5, 4)$
 $y = \frac{2}{7}x + b$
 $\star 4 = \frac{2}{7} \cdot 5 + b \star$
 $4 = \frac{10}{7} + b$
 $\frac{28}{7} - \frac{10}{7} = \frac{10}{7} - \frac{10}{7} + b$
 $\frac{18}{7} = b$
 $b = 2\frac{4}{7}$

Example 2

Let a line l be given in the coordinate plane. What linear equation is the graph of line l ?

$$-\frac{3}{5}x + \frac{4}{1} = -\frac{1}{2}$$

$$m = \frac{-1 - 4}{5 - 4}$$

use $(4, 1)$

$$y = mx + b$$

$$1 = -\frac{3}{5}(4) + b$$

$$\begin{aligned} \frac{5}{5}x &= -\frac{1}{2} + b \\ \frac{5}{5}x + \frac{1}{2} &= b \\ b &= 3\frac{2}{5} \end{aligned}$$

Example 3

Let a line l be given in the coordinate plane. What linear equation is the graph of line l ?

$$m = \frac{5}{1} = 5$$

$$\text{use } = (x, y)$$

$$y = mx + b$$

$$2 = 5(12) + b$$

$$2 = 60 + b$$

$$\begin{array}{r} -60 \\ \hline -58 = b \end{array}$$

$$y = 5x - 58$$

Example 4

Let a line l be given in the coordinate plane. What linear equation is the graph of line l ?

Exercises

1. Write the equation for the line l shown in the figure.

2. Write the equation for the line l shown in the figure.

-
-
3. Determine the equation of the line that goes through points $(-4, 5)$ and $(2, 3)$.

4. Write the equation for the line l shown in the figure.

5. A line goes through the point $(8, 3)$ and has slope $m = 4$. Write the equation that represents the line.
